

## **BIODIVERSITY POLICY**

As Enerjisa Enerji A.Ş., we conduct our activities across all operational locations and business lines, in recognition of our impacts and dependencies on the natural environment and biodiversity, according to the following fundamental principles:

- We comply with local regulatory requirements related to biodiversity and aim to align our approach with relevant international standards and best practices.
- We contribute to the United Nations Sustainable Development Goals (SDGs), performance standards/requirements of international financial institutions including those related to the conservation of biodiversity.
- We consider biodiversity a strategic priority in both our day-to-day operations within our regulatory framework and business decisions, aiming to reduce environmental impacts, manage operational risks, and align our activities with a nature-positive transition.
- We aim to avoid adverse impacts on wildlife and natural habitats. Where impacts cannot be fully avoided, we seek to apply appropriate measures to minimize and mitigate impacts, including the protection of biodiversity values through practical biodiversity measures such as biodiversity action planning, ecosystem risk assessments, and ornithological studies along migration routes.
- We continuously seek opportunities to cooperate with relevant regulatory authorities, academic institutions, and local administrations.
- We build internal capacity by raising awareness and providing training to our employees on biodiversity-related topics and, recognizing their role and responsibility in implementing this policy across our operations.
- We encourage our contractors and suppliers, within the scope of applicable contractual and legal agreements, to align with the principles set out in this policy when carrying our activities on our behalf.
- We periodically review our approach to biodiversity management using measurable indicators and transparently disclose our performance on biodiversity-related impacts to relevant internal and external stakeholders.

This policy enters into force upon approval and is periodically reviewed and updated by the management of Enerjisa Enerji.
